Profile

I design and build software that solves real problems, and I take it from architecture to production. I'm a developer, solution designer and architect. I take features from architecture and API design through implementation, pipelines and production. My depth in test automation makes me a stronger full stack engineer, not a narrower one.

Experience

Principal Software Engineer Jun 2023 – Present
insightsoftware · Hyderabad

- Own solution design, architecture and technical direction for the AI-assisted capabilities of an enterprise financial reporting product, and build them hands-on.
- Set engineering standards for a regulated platform and own quality sign-off for each release.
- Design integration points across web and Windows desktop applications, and build the automation layer (Selenium, Playwright, WinApp Driver) that verifies the stack end to end.
- Own Azure DevOps end to end: YAML pipelines, release gates, branch policies, self-hosted agents and multi-environment deployments.
- Designed and built the Visual Comparison solution for a report generation product that could not compare reports across versions. Product efficiency rose 70%, release validation dropped from 6 weeks to 7 days, and customer defects in report output fell 80%.

Lead Nov 2022 – May 2023
Cigniti Technologies · Hyderabad

- Led an offshore engineering team of 8 on a mobile client platform for Android and iOS, owning delivery planning, framework improvements, automation coverage and PR reviews across bi-weekly releases.
- Created and maintained Azure DevOps pipelines and the cloud device lab (BrowserStack) the team released through.

Senior Software Development Engineer Nov 2020 – Nov 2022
Microsoft IGD (Affluent Global Services) · Hyderabad

- Senior engineer on AvNext, a web platform for car infotainment and service management, working across services, cloud components and UI.
- Re-engineered the platform's custom test framework, refactoring base methods and tightening abstractions so the team could extend it.
- Architected and operated Azure components across Storage, Blob, Queues, Function Apps and Cosmos DB, with the pipelines that released them and observability through Kusto, Grafana and Elasticsearch.
- Validated internal API contracts with Postman and profiled service throughput with JMeter.

Software Development Engineer in Test Jul 2019 – Nov 2020
Dell Technologies (Magna Info Tech) · Hyderabad

- This is where my shift into development began. I contributed application code in C# and helped shape the technical design of features, alongside owning web and API automation.
- Brought unit testing and validation on dev machines into the team, which measurably improved code quality. Built a Test Data Management tool to support it.

Automation Engineer Dec 2015 – Jul 2019
Scotiabank (Tech Mahindra) · Hyderabad

- Started my career here. Built and owned automation frameworks across web and mobile applications, using VBScript and Java.
- Orchestrated plug-and-play frameworks such as Quantum across languages and OS versions. Built an automated Test Data Management tool and ran automation training for the QA team.

Jr. Software Engineer Jul 2014 – Jun 2015

Thredz Information Technology · Hyderabad

- Built two VB.NET and SQL Server products, designing the interactive screens and their supporting APIs, and assisted with deployment to test and production servers.

Projects and open source

Atlas Open source · Apache 2.0

An AI agent orchestration workbench for running, reviewing and steering multiple AI coding agents across software projects. Drives Claude Code, GitHub Copilot CLI and local Ollama models.

TypeScript · Fastify · PostgreSQL · React · MCP server · SSE streaming · Docker Compose · Playwright

DheQuest Self-hosted · Algorithmic trading

A self-hosted platform I designed and run on my own infrastructure. Traders automate strategies, back-test them against historical data, and execute through broker APIs.

React · Node.js · Express · MongoDB · Redis · Apache ActiveMQ · WebSockets · Docker

Experts Jar Hobby project

A platform for students with professional experience, and for experienced professionals switching technologies, to gain new skills through hands-on practice.

React · Node.js · Express

Skills

AI & agents	LLM agent orchestration, MCP servers, Claude Code, GitHub Copilot CLI, Ollama
Languages	TypeScript, JavaScript, Python, C#, Java, PowerShell, VB.NET
Web & services	React, Node.js, Express, Fastify, REST, WebSockets / SSE, Azure Functions
Data	PostgreSQL, MongoDB, Cosmos DB, Redis, Elasticsearch, ClickHouse, Kusto
Cloud & DevOps	Azure, AWS, Docker, Azure DevOps, Jenkins, YAML pipelines, Self-hosted agents
Quality & automation	Selenium, Playwright, Appium, WinApp Driver, Cucumber BDD, JMeter, Postman

Education

Kakatiya Institute of Technology & Science · Warangal, India · Graduated 2014
